Boardholders' Com. Says Alberta is Solvent

Can Pay Its Interest Obligations
And Expect Surplus

Alberta is economically solvent and able to meet interest obligations in full, a committee of bondholders headed by J. M. MacDonnell of Toronto advised Premier William Abernethy.

It was represented the full interest charge could have been paid this year and the province would a budget deficit of only \$192,216.

Since coming into office slightly over a year ago the Alberta government passed legislation arbitrarily cutting interest rates by an aggregate of \$3,000,000. The interest rate on some bonds was cut from six to three per cent which represents about the average for the full debt.

The province of Alberta is economically and fiscally solvent and can pay all its interest obligations in full and reasonably exact surplus in the near future.

Mr W Horn is at present in the hospital undergoing treatment for internal trouble. Latest report is that he is improving gradually.

A grand entertainment will be presented by Gordon Mezor and Juvelines, with assisting artists will be held in the Church School room on Friday Oct. 9th commencing at 8 o'clock. Admission, Adults 25c; Children 15c. The program is under the auspices of the Ladies Aid.

Admiral W. S. Sims, war time commander of the United States fleet in European waters, and a native of Port Hope, Ont., died last week. Admiral Sims was a first cousin of the late W. S. Jones, father of Mrs W. S. Jones of this town. Mr Jones resided here several years ago and was familiarly known as Corkey in their youth. Admiral Sims and Mr Jones were great pals. When young men they separated. Sims going to join the American navy and Jones to join the Mounted Police.

Farmers are coming to Redcliff from all parts of the surrounding country to get their winter supply of coal from the Cudson Brick and Coal plant here. The plant is kept busy supplying the demand for the popular grade of coal.

Here and There

Passenger officers of the Canadian Pacific Railway and Sir John A. Macdonald, Prime Minister of Canada, arrived at Vancouver recently and held a series of historic meetings. Among these were Donald A. Smith, George B. Smith, James J. Hill, Vice Presidents and chairmen, names associated for the past half century with the construction of Canada's first transcontinental railway.

The party actually completed a group of film players portraying the historic characters in the trans-Canada journey. The "Great Barrier", Greatest British picture depicting the trans-Canada railway construction from 1879 to 1914.

For Gene Pearson, one time world's champion roller skater, the Redcliff Skating Rink course at the famous rink in the Redcliff is everything but smooth. Gene and I played it against two guests at the hotel and we were beaten. With a huge roller it may seem funny to hear we simply couldn't keep our heads on the game—the skater was simply too much.

Good Suggestions For Town Diamond Jubilee

The Editor Redcliff Review—

Dear Sir:

A telegram received this week from the department of Municipal Affairs, Edmonton, verifies the fact that Redcliff was incorporated as a town on the fifth day of August 1912.

1937, therefore, will be Redcliff's silver jubilee year and steps should be taken immediately to fittingly celebrate the occasion. If this opportunity is wasted up, not until 1962 can we again expect to celebrate another jubilee occasion and by that time a great many of the present inhabitants may be a real dead tree.

It has been further brought to light that Redcliff's first town council met in regular session on the third day of October, 1912.

To put the affair over in a big way a representative committee could be called together as soon as possible perhaps at the suggestion of the mayor of the town. This committee should include representatives from the school, school board, teaching staff, ministerial association, business association, merchants association, labor organizations, charitable organizations, lodges and the local press.

A proper list for the celebration of the jubilee should be decided upon—a time which would precede and supersede all other events of that nature in the fall of the year when the weather is usually so dependable. "Freeding actual celebrations" could be a publicity campaign which Redcliff town, Redcliff residents and Redcliff potentialities would be given a program of much desired and long overdue prominence.

Celebrations themselves might include among other things a general holiday on the opening day, a huge street parade, public exhibition of Redcliff products, the appearance of government officials, evening attraction each night ending with a brilliant fireworks display on Saturday, a tombola, a large patronize local stores and industries campaign, a special edition of the Review, and if the annual July 1st stampede is discontinued next year, it might be well to add a sports day as one of the afternoon attractions ending with a Medicine Hat to Redcliff bicycle race open to all residents in Alberta.

Several hundreds of dollars will be needed to finance a proper celebration, which amount can be raised partly by public subscription and partly by entertainments put on throughout the winter months.

It is imperative, therefore, if the best is to be so on that organization work should be started immediately.

We have the town. Only the people in it can prevent Canada from knowing all about it. If we are underlings,

"The fault, dear editor, is not in our stars but in ourselves."

Thanking you for so much grace.

Yours truly

Irrigation Commission Meeting at Vauxhall

District Could Supply 2,000
Additional Irrigable Acres

At a meeting held at Vauxhall Thursday, members of the provincial commission inquiring into conditions in Alberta's irrigated projects learned from W. Hays, general manager of the Canada Land Irrigation Company, that the company's ability to shareholders is to be approximately \$15,839,000. No dividend has ever been paid and the company has never shown profit. About \$20,000 would be required to put the project into good condition and the sum of about \$250,000 could supply new works for about twenty thousand additional irrigable acres.

Mr and Mrs Coverdale, of Calgary are at present guests of Mr and Mrs W. Hill.

Next Monday, Oct. 12th, will be observed throughout Canada as "Thanksgiving Day." It will be a general holiday in the Dominion.

This week has been appointed the Dominion government as "Fire Prevention Week." The idea is to warn the public to take all possible precautions to prevent fires.

The seventh general council of the United Church of Canada, a national organization of women, met in the ministry. The council approved a recommendation of a national committee on law legislation that the ministry be open to persons of either sex.

In the centre of Alberta's oil industry, a garment factory with a capitalization of \$250,000 will be established in Lethbridge. The factory will be built and operated by the Logan Garment Company of Logan, Utah. Construction of the plant will start immediately. Wool knitted-wear will be manufactured.

According to reports from agency bankers, between five and six million dollars in cash and negotiable securities have been transferred from local banks and trust companies to branch offices outside the province, at the request of depositors and security holders.

Reason given for this is that the owners are favoring the government in contemplating attaching bank accounts and negotiable certificates.

C. W. A. Scott and Giles, Ontario, arrived in the air from Port Hope, England, to Johannesburg, South Africa. The distance was 5,500 miles and they did it in 52 hours, 56 minutes and 48 seconds. The average speed was 123 miles an hour.

Another Magistrate Loses H.S. Commission

Because He is Not Supporter
of Social Credit

It is now beginning to look as though all government employees who are not 100 per cent believers in and supporters of the Social Credit Government and its policies are to be fired with or without any other reason and without notice. The government is apparently no respecter of persons.

During the past week another Police Magistrate has received notice to forfeit his commission. In this case it was Mr. E. G. Turner, of Brooks who has been a Police Magistrate at that point on the last three and a half years. As in the case of Hanna a request of Mr. Turner for a public inquiry into the charges against him was summarily dismissed by the Attorney General's department. Neither official was given an opportunity to defend himself but simply ordered to get out.

In the dismissal of Police Magistrate W. P. Roberts, of Hanna the excuse given by the Attorney General's department for his dismissal was: "It is felt that you would be prejudiced against any supporters of the government who might come before you in your capacity as Police Magistrate." If that is the honest opinion of the Attorney General's department how but it if a Social Credit supporter is appointed to take Mr. Roberts' place? Again if that is the honest opinion of the Attorney General's department, of the caliber of the men in this province who have to say in God help the man or woman opposed to Social Credit's principles who comes before a Social Credit Magistrate.

The reason we say God help the man or woman, is because during the half century we have been interested in politics and political parties in this our native land, we have never known, heard of or seen any political party which has been more prejudiced, biased and intolerant against those who do not see eye to eye with Social Credit and the rank and file, than the Social Credit party of this province.

C. W. A. Scott and Giles, Ontario, arrived in the air from Port Hope, England, to Johannesburg, South Africa. The distance was 5,500 miles and they did it in 52 hours, 56 minutes and 48 seconds. The average speed was 123 miles an hour.

PLUG SMOKING TOBACCO

Requisites For Safe Driving

The summer just passed has produced the usual crop of automobile accidents to drivers and passengers in the three prairie provinces. The daily newspapers have duly recorded numerous accidents together with the names of killed and injured and, when the information was available, the causes of these frequent disasters.

It is yet too early to record figures detailing the number of accidents and the toll of dead and injured. But it seems to indicate that public memory is short lived and that the capacity of automobile drivers to avoid accident, no matter how well-intentioned or how careful they may be, is below par. The latter is probably a close approach to correct diagnosis of the ailment.

It does not necessarily follow that such campaigns are a failure, but it seems to indicate that public memory is short lived and that the capacity of automobile drivers to avoid accident, no matter how well-intentioned or how careful they may be, is below par. The latter is probably a close approach to correct diagnosis of the ailment.

Statisticians and experts working on figures and available data on the causes of automobile accidents in the United States last year came to the conclusion that the number of accidents arising from defective equipment or faulty mechanism is comparatively insignificant, from which it follows that the human element, the capacity and capability of the driver, is in the majority of cases, the factor mainly responsible for disasters on the highways.

In other words, a large percentage of automobile accidents, can be reasonably attributed to lack of training or lack of experience on the part of the driver and perhaps in many cases, a combination of the two. This statement does not take into account accidents which can be charged up against recklessness, alcoholism or criminal negligence.

Undoubtedly lack of training and lack of experience are the causes of a number of crashes and the opinion is gaining ground that a substantial percentage of accidents are caused by drivers who are ordinarily careful but who have not had sufficient training to pose danger in times to avoid it or who, sensing a pending danger, are not skilful enough to resort to the proper course to follow in time to prevent disaster.

In view of these conclusions there is much to be said for the adoption of courses of training for those who intend to operate powerful and speedy motive vehicles over the highways. This might be followed by examination of applicants for operators' licenses for the first time, though it would not be feasible to insist on making such tests the *deus ex machina* for the right to drive for those who have previously been granted licenses. Courses of such a nature, if properly carried out by competent persons would at least partially, if not completely, take care of lack of training.

As for accidents caused by lack of experience, there can only be overcome by experience, supplemented by instruction. That drivers can and do develop a form of road sense which warns them of impending danger is the testimony of Oliver Stewart, writing in a recent issue of *The Observer* of London, England, where the mounting accident toll is causing grave concern.

The writer explains that in course of time a driver learns to interpret small signs which to a novice would pass unheeded. "A driver on a main road about to pass the entrance to a side road, suddenly slows down. No other vehicle is visible; yet as he reaches the side turning, a motor bicycle comes out of it and turns into the main road. If the driver is questioned as to the reason he slowed down before any other vehicle was visible, he will probably say: 'It's intuition'."

To Mr. Stewart that is not altogether a satisfactory explanation. He pointed out that in all probability the driver unconsciously registered some small sign that something was coming down the side road, a pedestrian turning his head in that direction or a flock of sparrows taking to flight from the ground or some other indicator.

"The swift interpretation of such things," says Mr. Stewart, "is road sense and it is acquired with practice; but it is much too rarely taught. At first the signs may be seen, but not interpreted; and, in the absence of specific instruction, it is only with long practice that the interpretation can be expected to come without delay."

May Increase Duty

British Liberty To Get Revenue From Foreign-Made Flags

Foreign-made flags, pictures of the King and other articles suitable for the coronation may be subjected to higher import duties.

Increases are being considered on articles for use in or commemorating the coronation, or as souvenirs, which have a representation of the King or any member of the royal family, any royal emblem, or bear a flag of any country in the British Empire, or are in any way suitable for the coronation.

Papa to Johnny, four years ago: "Won't you have another piece of duck, Johnny?"

Johnny: "Yes, please, thank you. Make my favorite chicken 'opt turkey'."

Producing New Paper

Russian Scientists Claim It Will Last 1,000 Years

A new brand of paper—so strong that it will last 1,000 years—has been invented by scientists at the Leningrad laboratory of preservation and restoration of documents, it is claimed.

The formula for the paper was discovered as a result of studying Egyptian and other ancient kinds of paper.

According to the director of the laboratory, Professor Tikhonov, production of the new paper will cost no more than the manufacture of ordinary paper.

An improvement in the gear wheels of dial telephones now permits them to live through 5,000,000 operations instead of 500,000 as formerly. 2199

Houses Strange Collection

Many Interesting Curios To Be Seen In Private Museum

Charles Q. Eldridge, veteran world traveller, who has celebrated his 81st birthday, is the sole owner and curator of the Eldridge free museum at Old Mystic, Connecticut, which boasts of more than 7,000 items collected in the last 81 years.

Early in life Eldridge developed a mania for collecting things, and in 1917 he erected a separate building for his trophies and opened his free museum. Since that time, more than 60,000 persons have viewed the collection, while Eldridge himself has personally conducted 20,615 persons through the building.

The collector is as fond of entertaining as he is of collecting curios. He displayed his love of entertaining friends in 1891 when he returned to Old Mystic after engaging in the building business for 20 years, and built a large recreational centre which he called Riverview. Hundreds of guests from Connecticut and neighboring states have used his bowling alley, shooting gallery and other amusements.

The museum houses as strange a collection as has ever been assembled. In front of it rests the bleached skeleton of a whale, 80 feet long, the gift of Capt. John C. Spicer of Groton, who caught it in Hudson Bay in 1878.

An enormous penguin greets the visitor just inside the door. It came from Cape Horn and the cord around its neck is typical of the labels Mr. Eldridge has placed on the exhibits. The card reads: "I am sure that you folks, like me, are close readers of the Bible, so you will remember that the Bible mentions a penguin. I have ears and hear not and eyes and see not. Well, here is a bird which has wings and flies not."

Mr. Eldridge takes more pride in his souvenirs than in his natural history collection. He has what he believes is the first cannon ball fired against Fort Sumter, and he says that Edmund Ruffin, the fellow who fired that shot, also fired the last shot of the civil war. When he heard that Lee had surrendered he shot himself through the head.

Some of his other prize items are a petrified coconut, which, he says, dates from 47 A.D. and was found during the digging of the Panama canal; a ship model built in a bottle and which won the world prize for that sort of thing in 1884; a petrified otter weighing eight and one-half pounds which was found in South Africa in 1881; a piece of wood from the Confederate gunboat *Merrimack*; some wooden hinges used on a barn door for more than 200 years; an almost complete set of all commemorative coins issued by states or the federal government, and several thousand rare postage stamps.

For Brighter Silver

Potato Water Is Said To Give It Extra Sparkle

Few people know that if silver is polished while it is hot the work is halved and the resulting brightness doubled. It is worth while to plan your washing up with this end in view. Leave the silver fork, spoon, teapot and cream jug to the last, pour a little fresh hot water into the basin and wash up the silver, dry it. If before it has a chance to cool down. Another queer and little known tip for silver is this: To give a extra sparkle for a special dinner party, soak it for a moment in the water that the potatoes were boiled in. Try it while still hot and the result will be amazing.

SELECTED RECIPES

DATE MUFFINS

¾ cup shortening
1 egg
2 cup flour
3 teaspoons Magic Baking Powder
¼ teaspoon salt
¾ cup milk
1 cup date, pitted and chopped.
Cream shortening, add beaten egg, flour in which baking powder and salt have been sifted, and milk. Add dates. Bake about 25 minutes in greased gun pans in moderate oven at 400 degrees F.

For sweet muffins stir ¼ cup sugar with dry ingredients.

Teacher—Johnny, you must bring a written excuse for being absent yesterday, from the head of your family."

Johnny—"Oh yes, ma'am, on a fortnight's holiday, ma'am; shall I bring one from my father?"

Pupils in Scotland have to get through about three lines as many books in the school year, as do London school children.

Great Britain is standardizing all brass fountain products.

Women in Banking

Few, If Any, Hold Positions Of Responsibility In Canada

Very few, if any, Canadian women, hold positions of responsibility with the banks. It is a field in which thus far the more males the better, able to stave off the feminine onslaught into the business world.

But in the United States the number of lady bankers is sufficiently great to warrant an association of their own—the Association of Bank Women. This group will convene about the middle of October, just before the convention of the American Bankers' Association.

Officers held by members of the fair sex included in the association's roster run the entire gamut of the banking profession from president down. Included are presidents, vice-presidents, cashiers, trust officers, statisticians, directors, branch managers, and managers of departments such as exchange, collection, publicity, savings.

See Better Times

Secretary Of League Of Nations Paints Optimistic Picture

The turning-point in a world industrial depression has been passed, an official League of Nations report declared.

The report, prepared by the secretary, Joseph A. C. Avon, presents an optimistic picture and says despite political clouds the task of solving outstanding international economic problems has become easier, and the situation would help to dissipate political apprehension.

Avon in the report attributed the ills of agriculture to share fully in the general improvement in the protection of agriculture in the industrial countries.

Officials said the league's economic committee favors discussions among the powers as soon as political conditions permit.

Taking More Medicine

The growing consumption of medicine in England is worrying Sir Kingsley Wood, minister of health. "We are rapidly becoming a nation of medicine drinkers," he said in a speech to the House of Commons. The cost of medicine per head in England, he said, is double that in Scotland.

One Of Royal Pets

Favorite Pony Of Late King George

Before he Sandringham, the favorite pony of King George, has returned to Sandringham. He has become a personal charge in the Royal list of polo maddened out of the King's Privy Purse. With the closing of the Castle mews at Windsor, Jack's return to his old home is thought the most convenient way of keeping him in comfort. Mr. Marshall, who has looked after the pony for nearly 20 years, is also to return to Sandringham. King Edward has placed a pretty cottage at his disposal, and he will enjoy the life of a Royal pensioner with nothing to do but to look after the pony and ruminate on his 50 years' Royal service.

Seen In Old Country, By Ontario Agricultural Minister

A good brisk market for Canadian feeder cattle was encountered by Hon. Duncan Marshall during his recent stay in England and Scotland.

The Ontario Agricultural Minister predicted that this demand will continue this fall. William Henderson, one of the "Old Country" cattle feeders, held the same opinion, the Minister said.

The British government hopes on beef is one of the props of this "feeder" market. Canadian cattle can qualify for the bonus after a three-month stay on British pastures.

Mr. Marshall said Canadian horses were also selling at good prices and very quickly in the Old Country.

"There is a market right now for more," he said. "Scotland has not got enough horses to do its work."

Market For Feeder Cattle

Seen In Old Country, By Ontario Agricultural Minister

A good brisk market for Canadian feeder cattle was encountered by Hon. Duncan Marshall during his recent stay in England and Scotland.

The Ontario Agricultural Minister predicted that this demand will continue this fall. William Henderson, one of the "Old Country" cattle feeders, held the same opinion, the Minister said.

The British government hopes on beef is one of the props of this "feeder" market. Canadian cattle can qualify for the bonus after a three-month stay on British pastures.

Mr. Marshall said Canadian horses were also selling at good prices and very quickly in the Old Country.

"There is a market right now for more," he said. "Scotland has not got enough horses to do its work."

Campaign Urgently Needed

To Show Europe Necessity Of Importing Hard Canadian Wheat

A campaign to fully convince Continental countries of the necessity of importing hard Canadian wheat to blend with their own was urgently needed today, Lieut.-Col. H. Harro, Canadian Wheat Commissioner to France, stated at Winnipeg.

It was unlikely, he said, the French market would be lost to Canada, because French wheat must be blended with hard Canadian wheat to make good bread.

"Canadian wheat has achieved an enviable reputation with French farmers during the past year, and they would not now abandon Canada in favor of Russia," the commissioner believed. "Much of the market Canada has lost in Europe might be recovered through an educational campaign."

Most of the best Canadian wheat originated in Russia, A. Epinov, chief of the State Plant Breeding Fund of the Soviet Commissariat of Agriculture, declared. He is touring Canada to discover whether descendant hybrids are suitable for Russia.

Chief objective of the Soviet for the present, he said, was to supply her huge domestic market.

Although French is spoken by only 45,000,000 French men and women, it is understood and spoken by at least 75,000,000 other persons who are not French.

The grounding and the woodchuck are the same animal, the former name being given to the animal in the eastern states.

EQUAL TO THE best ELECTRIC SET reception

IMAGINE AN "A" BATTERY which didn't have to be re-charged and which didn't lose its power gradually but maintained its peak to the very end.

And imagine that this battery gave perfect service not for just two or three months but for 1000 playing hours.

Wouldn't you jump at the chance of having such a marvel in your own set?

The opportunity is yours! Your dealer has just such a battery. It's called Eveready Air Cell and does everything the ideal "A" battery should do. It actually maintains itself by simply breathing air—and its power scarcely fluctuates for 1000 playing hours.

See... and listen to it, the new 1936 Air Cell Radio Sets at your dealer's.

EVEREADY AIR CELL RADIO 'A' BATTERY

LIVES ON AIR FOR 1000 HOURS

Subsidies Ill-Designed

British Subsidies To Producers Of Wheat Are Wrong, Sir Daniel Hall Condemns

"Ill-designed" was the word Sir Daniel Hall's brief description of British subsidies to producers of wheat and sugar beets. Sir Daniel, former chief scientific adviser to the ministry of agriculture, addressed the agricultural section of the British Association for the Advancement of Science.

Since Great Britain produced only two-fifths of her total food consumption, the choice should be exercised between commodities imported and those of which home production was encouraged, he argued.

Wheat and sugar were cheap in the world's markets and easiest to import in time of war. Land was better adapted to the production of livestock and vegetables.

Production of milk, Sir Daniel proceeded, already was 30 per cent in excess of its consumption as milk, but a high price to the public was being maintained to cover the loss on conversion of the surplus into cheese and other things. It was ill-designed milk if the price continually increased. The supply of vegetables and fruit could be extended by diverting to them some of the assistance accorded less desirable commodities.

Sir John Orr, famous dietitian, said the diet of nearly one-half of the population of Britain was below the best standard reported by the international committee of physiologists. This consisted of a daily supply of one and three-fifths of a pint of milk, a quarter pound of meat, one egg, one ounce of cheese, half a pound of potatoes, a quarter pound of vegetables and legumes.

He said health requirements demanded nearly double the present consumption of half a pint per head. Average consumption of eggs should be raised from four to seven weekly. The greatest deficiency was in fruit and vegetables. Sir John told the meeting. Production of these foods would bring prosperity to agriculture.

He held that the cost of an adequate diet, nine to 10 shillings per week (about \$2.50 to \$2.60) was beyond the purchasing power of one-third of the community. There was no evidence to suggest that the housewife in the poorer homes knew less about food values than did her wealthier sister.

Ancient Geological Discovery

Michigan Is Oldest Region In Which Life Is Known To Have Existed

Dynamiters at a municipal quarry in Iron Mountain, Mich., were engaged by Oscar H. Rehn, geologist and mining engineer, with having unearthed evidence of life forms that existed 1,000,000,000 years ago.

Rehn said the discovery means the upper Michigan peninsula region now takes precedence over the section near Saragosa Springs, N.Y., as the oldest region in which life forms are known to have existed.

The important new tract lies between the north and south iron veins on the Mesozoic range and is far older than the Iron foundation, he said.

"If this doesn't outrank all the geological discoveries of history, it is at least as important as the appearance of the dinosaur in Montana, the toothed bird archaopteryx in Bavaria, or the rancid in three camels, Texas and saurian-toothed tigers near Los Angeles."

The geologist stated billions of years ago in the Algonquian area, there was a large granite island. The discovery here, he said, led geologists to deduce that the shore was gently sloping since the deposit there was measured instead of on granite and gravel, as it would have been had the shore risen sharply from the water's edge.

Memorial To Lawrence

Mrs. Lawrence, mother of Lawrence of Arabia, has died and a grave memorial to her son is to be erected in the little graveyard at Moreton, near Dorchester. The village community is near the place where Lawrence was killed last year. The memorial is being designed by Eric Kennington, the artist, who was a friend of Lawrence. It is being cut out of Portland stone by a Dorchester mason, H. Grealy.

The distance from home plate to second base of an official baseball diamond being 127 feet three inches, a catch has to hurl the apple approximately 130 feet to catch a home runner sliding into that bag.

Some radio artists are quite well off—in fact, they are better off than

AIRCRAFT FACTORIES SPRING UP LIKE MUSHROOMS IN ENGLAND

The Royal Air Force expansion scheme has an accelerated output of planes in England that factories and aerodromes are being constructed all over the country to meet the demand for machines. Here is a typical "day" in an aircraft factory in the Mother Country, with employees working night and day to make aeroplanes.

Plants That Taint Milk

Are Sometimes Eaten By Cows In Pasture Or Hay

Much has been done to eliminate barn flavors in milk, but so far little attention has been paid to plants that taint milk, giving it an unpleasant flavor or odor. Certain taints undoubtedly arise from plants eaten in the pasture or hay, and steps should be taken to eradicate them when they occur in abundance. Fortunately, not every highly flavored or perfumed plant eaten will taint the milk. The noxious product must be digested by the cow if it is to go into the milk. The commonest taint is known which comes from the cow eating wild yarrow or green. Buttercups will cause bitterness if eaten in quantity when green, though in the dried state in hay they are harmless. Oxyris dactylon, chamomile, tansy and yarrow all produce bitter milk. Spurge causes milk to become frothy, and horsetail and marsh marigolds may cause reduction in yield and quality of the milk. Turnips and cabbages will taint milk unless fed after milking is over. Root tops are said to give a fishy taint if fed too largely.

Plane Factories Busy

British Firms Ordered To Build All They Can

H. H. Potter, Vancouver aircraft designer, and co-owner with Sir Ernest Wighamby Potter of a British aeroplane manufacturing firm, said the English government had ordered the firm to "build all we can."

In Nova Scotia after a trip to England, Mr. Potter said a new bombing plane turned out by the firm and having new secret equipment had been taken over by the British government.

"Britain doesn't want war but she is protecting herself against its advent," Mr. Potter said.

"So you're the chief of police," said the stranger to a small American. "Glad to know you, I wonder if I could also shake hands with the chief?"

"Sure," replied the police chief. "Just wait while I change hats."

"What's the name of that song dedicated to the early morning milkman?"

"Oh, you mean 'Wagon Wheel'."

Solving Economic Problems

Depends To Great Extent On Progress Of Science

Solution of the world's economic problems will be found through the progress of science, predicts David Barrow, president of the Radio Corporation of America, writing in Modern Mechanism magazine.

"Only about one-half of the human race is, at present, within the orbit of industrialized civilization," said Mr. Barrow. "Unhappily, the other half is in the sphere, may create immense new producing and consuming areas and provide greater scope for growth and general welfare than that humanity has begun to imagine."

"Until our own generation, the wealth of the world came from below the surface of our globe—from the mines and waters and fertile soils. It is only in the last 30-odd years that humanity has begun to reach upward for new wealth toward the air, into the stratosphere. Already, we have made an impressive beginning with aviation and radio."

"It is only a small beginning but one could speculate at length on the potential resources that still lie untouched in ultra-short waves, in sun energy and in the stratosphere planes. Americans once faced the frontiers of geography. To-day, we face new frontiers of science."

The Lesser Evil

A burglar's wife was being cross-examined.

"Madam, you are the wife of the prisoner?"

"Yes."

"You know he was a burglar when you married him?"

"Yes."

"I ask you how you came to marry such an individual?"

"You may," snapped the witness. "I was getting old and had to choose between a burglar and a lawyer."

An automatic signal to long-distance telephone calls, warning them when their time is nearly up, is being introduced by the British post office.

Canlon and Swallow, China, 300 miles apart, are to be connected by a new railway.

Gave Him Satisfaction

Famous Post-Office Received Heart-Set Complaint From Long Man

When Henry Wadsworth Longfellow was departing from an audience with Queen Victoria, he was escorted at the palace gate by a working man who, hat in hand, advanced and said, "Please, sir, your honor and are you Mr. Longfellow?"

"I am," replied the poet.

"And did you write the 'Psalm of Life'?" the man asked.

"I did," answered Mr. Longfellow.

"Then, your honor, would you be willing to take a working man by the hand?"

Instantly the poet extended his hand and gave his unknown admirer a warm handshake.

Telling of the incident later, Longfellow said very earnestly, "I never in my life received a compliment that gave me greater satisfaction."

Christian Science Monitor.

Problem Of Over Production

Solution Of The Problem Is In The Realm Of Economics

Solution of the problem of over-production in agriculture lies in the realm of economic and agricultural science, Prof. J. Hendrick, president of the agriculture section, told the British Association for the Advancement of Science.

"It is our social organization, our statecraft, our economic system, which are at fault when the abundance which is produced cannot be brought to the many who are in need of it," he said.

Seattle Island, off the coast of Newfoundland, is sometimes known as the Isle of Lost Ships. It is also known as the "Graveyard of the Atlantic."

"How's collections at your church, Bruder Jackson?"

"Well, we ain't neither had to stop in de middle of a collection to go an' empty de box."

Christopher Columbus would have had to sail more than 5,000 miles off his course to miss discovering the New World.

Life's span in Great Britain has increased 17 years since 1876.

Value Cannot Be Estimated

Regalia For King Edward's Coronation Worth Many Millions

Twenty-five million dollars wouldn't buy the regalia which will be used when King Edward is crowned in Westminster Abbey May 12, 1937.

It is impossible to estimate its actual value, but the age and historic value of the different jewels, crowns and articles make them almost priceless.

Among those parts of the regalia which will be used at the coronation there is the Ampulla. This is a medallion term for the vessel of gold, in the form of an eagle, which stores the oil for the anointing. It weighs about ten ounces, and is about nine inches in height. Part of it is older than 1600.

There there is the spoon into which the oil is poured. It is of silver gilt, the handle set with four pearls. It is believed to date from the 13th century.

The orb is a ball of gold, about six inches in diameter, with a gold band set with a number of various jewels. The cross on its top is set in a large jewel.

The ring, usually called "The Wedding Ring of England," is of pure gold with a jewel having a flat surface upon which is engraved a cross. A new ring is made for each sovereign. An old tradition is that the ring the ring die, the longer will the reign last. That happened to some time in the case of Queen Victoria, for it was engraved on the ring that it could only be removed by putting the finger into red water, and she reigned longer than any other European sovereign, 62 years.

There are two scepters. The Royal Scepter is about three feet in length, and divided into three parts of plain gold, studded with jewels, notably part of the Cullinan diamond in the top part, surmounted with a cross set on a large jewel.

The Scepter with the Dove is the scepter used by the Royal Scepter. It is studded with jewels, the dove being moulded in white enamel, and set on an orb of gold.

The so-called Staff of St. Edward is not really a scepter, but a long rod, with an orb and cross on the top, without any jewels. It is merely carried in procession.

Two crowns are used. The one called St. Edward's is that which the sovereigns are crowned. It is of gold and set with countless jewels. On its top an orb is mounted by a cross, and inside is a cap of velvet. The Imperial State Crown is the crown also used on state occasions.

Exhibit Was Different

British Orchestra Made Of Paper Shown At Toronto Exhibition

An entire orchestra from drummer to the last of the stringed instruments, was shown in the Women's building at the Canadian National Exhibition, Toronto.

The orchestra included more than 30 players and was an entry in the paper sculpture section. A pianist was shown thumping a grand piano, the maestro stands with baton in the air, the pretty girl harpist fingers the strings of her golden instrument, and the drummer stands poised with drumstick aloft.

Instrumental players, everything is made of paper, and so lifelike are the attitudes of the players and their expressions that women arranging as white in all parts of the building gathered around the little orchestra to admire it.

Some notable exhibits were seen in entries by women 70 years and older. A square of lace made on a pillow by pious, rare nowadays in any exhibit, was sent in by a woman more than 90 years old. In this case, too, were several quilts also made by women more than 90.

Among those who personally demonstrated the art of the quilt was Mrs. M. A. Thomas of Orkney parkway, Toronto, who has been exhibiting regularly for many years and who has had at least nine first prizes in the last 10 years.

Quite were among the most numerous exhibits for competition. Many are very beautiful, and they come from coast to coast. The obvious interest in quilts will be supported by one of the building's main features this year, a quilting bee, which, in an old-fashioned setting, will be "put on" during the Exhibition by a Toronto quilting circle.

A swarm of stinging bees have arrived here from Central Africa for experimental purposes and some will be released to see if they are harmless.

China's steady shift to foreign style clothes is booming the woolen industry.

Buyers of new cars in Germany must deduct the cost from income tax returns.

For War And Peace

No Moral Obligation Is Recognized By Science

Science, lending aid to man both in war and peace, "recognizes no moral obligations," British Association for the Advancement of Science was told.

Judging of the use to which science may be put, Prof. William Cramp, president of the engineering division of the association, asserted, is up to man—and the engineer is no better and no worse than his brethren.

Surveying the engineer's relation to the nation, Dr. Cramp asserted: "The engineer is called upon to advise certain changes laid against him by the preacher and the press. The first is that he is equally willing to lend himself to works of utility and to works of death and destruction."

"Remember, however, his dual role. Pure science has nothing to do with either; he recognizes no moral obligations whatsoever."

"The same explosive that releases coal underground can also kill men in battle. The telephone is useful in war and peace, and in the front lines trenches. The same machine may be beneficial in one case, harmful in another. The same principles that bring the stars within our grasp also control the range-dome."

There is no scientific apparatus that cannot be misapplied, and in every advance there is a corresponding drawback.

To the extent that the engineer is a scientist, the use to which his discoveries shall be put does not concern him. But, it will be argued, the engineer as a citizen and a commercial man—citizen and makes armaments for profit.

It is said if he does not he is not credited with at least as much honesty of purpose as the politician who declares war and orders the guns.

"May he not be persuaded, profits apart, like the Archbishop of York, the Great War was a thousand times worth while?"

Fond Of Reading

Convicts In Michigan Prison Make Good Use Of Library

Convicts at the Southern Michigan prison at Jackson read more books dealing with law and crime detection than any other.

Dr. H. H. Billson, librarian of the prison library, the largest of its kind in the world, estimates that 30,000 books and travel books had been lent in popularity among the prison inmates.

Among the magazines, detective and western stories are the most popular.

Billson estimates that twice as many fiction books are read as non-fiction. Among the latter the leaders in interest seem to be religion, philosophy and travel. The books, natural science, useful arts and literature.

One of the most popular sets of books in the library, which contains 16,000 volumes, is a complete set on business practice, loaned in connection with our correspondence school course on business.

During one month 3,500 newspapers were distributed to the prisoners, including 300 daily newspapers each from Detroit.

"Books mean a lot in a place like this, and the men as a whole are careful to see that nothing is done contrary to their reading privileges."

Was Greatly Impressed

English Traveler Thinks Canada Charming Place In World

To Mr. Robert Hestley of London, the wife of the noted traveler and big game hunter and herself a traveler of no mean note, Canada rates top in many ways. She said that she had sailed for England with her husband and two children after a fishing expedition on the Gatineau River. "Canada is the cleanest place I have ever seen. Your streets and shops and especially your railway stations are the cleanest in the world, I think."

"Sometimes we see men come late to prison hardly able to read and have as well-educated men," said Hestley.

"Books mean a lot in a place like this, and the men as a whole are careful to see that nothing is done contrary to their reading privileges."

Two colored troopers were lying up for show outside the noon bell.

"Ray," declared one, "if you don't get someplace before me, I'm going to knock you out of house 'n' home!"

"See you how y'll figure to do that, I ain't got no home?"

"Brother, I'll dig you out!"

The Nile is the longest river in the world—four thousand three hundred miles long. The Niger is two thousand five hundred miles long, and the Congo is one thousand six hundred miles.

THE HOUSEHOLD Baker

Midred Mac McKenzie, supervisor of the Orlive Flour Mills Institute of Household Science, will send free information on cooking, baking and housekeeping problems upon receipt of coupon from a bag of Orlive Flour. Address: Midred Mac McKenzie, Orlive Flour Mills Co., Ltd., Winnipeg, Man. Orlive Royal Household Flour is triple-tested to help ensure your success in baking—tested for flour quality before milling and for baking quality after milling—all before you buy. Whether for bread, cakes or pastry, its uniformity and absolute dependability will simplify your baking in a amazing degree.

Try these tested recipes with Triple-tested Flour

SPICE BREAD
Temperature: 100° F. 20 minutes. 1 cup shortening, 1½ cups sugar, 1 egg, 1½ cups flour, 1 tsp. baking powder, 1 tsp. salt, 1 tsp. cinnamon, 1 tsp. nutmeg, 1 tsp. cloves, 1 tsp. allspice. Cream the shortening and gradually add sugar until light and fluffy. Add egg and beat. Sift flour, baking powder, salt, spices and add to mixture. Add 1 cup boiling water and mix thoroughly. Bake in a 12x12x4 inch pan at 100° F. for 20 minutes. Let stand until cool. In a 12x12x4 inch pan.

CARAMEL ICING
1 cup brown sugar, 1 tablespoon butter, 1 cup milk, 1 tsp. vanilla. Mix together the brown sugar, butter and milk. Boil for 5 minutes. Add vanilla. Pour over cake and let stand until cool.

FREE
Save and get a copy of the Orlive Flour recipe book. It contains 100 recipes for bread, cakes, pastries, etc. Write for your free copy to: Orlive Flour Mills Co., Ltd., Winnipeg, Man.

Due To Physical Changes

Reason For Increase In Blood Pressure Is Explained

The rise in the blood pressure is due to the exercise itself, but to physical changes. Prof. R. J. S. McDowell, president of the physiology section, said in a paper read at Blackpool, England, before the British Association for the advancement of science.

If exercise could be taken without physical stress being involved—without the brain knowing the exercise was being taken—the blood pressure probably would fall, he said. This had been found to occur in horses.

Explaining that when a person exercises the blood pressure rises but falls even below normal when the exercise stops, Prof. McDowell said this had been explained as due to the accumulation of blood in the dilated muscles.

His observations led him to believe this theory was not wholly correct. He found the fall was due at least in part to a lessening in the resistance of muscles hardened during the exercise.

Clean Your Chimney

The cost of cleaning or repairing a chimney is trifling when compared with the cost of rebuilding a home. Yet more homes are damaged or destroyed every year by fires originating in defective chimneys than by any other single cause of fire. With the approach of winter rural and town residents should have all chimneys and furnaces cleaned and all defects repaired.

Coleman Hot Air! Cooks with Air!

Whether you are a city dweller or a country boy, you will find the Coleman Hot Air Cooker a most useful and convenient appliance. It is a small, portable, and efficient cooker that can be used in any situation. It is made of heavy metal and is completely fireproof. It is easy to use and requires no special skill. It is a great asset to any household.

Thou Shalt Not Love

—A NOVEL BY—
GEORGIA CRAIG

CHAPTER VII—Continued

"I know a few desert songs, too, Hassan," Starr told him. "The English words."

Michael grinned as he had every time she had called him "Hassan" since the first time. That fitted in, too.

"What could be sweeter?" he asked. "Practice up on 'em, Starr. I suppose your name really should be Suleika, or something of the sort, but we'll skip that since you insist on your own. . . . Maybe there ought to be an Arabian serving woman, with a lot of jingling anklets and a purple handkerchief over her head."

"She's dirty," Starr said. "I don't like it. I can wash my own back."

There were some interesting times during the next few days while they found and fitted up the apartment, which "Play-Girl" would burst upon New York ecstatically. Every moment was full. Starr had never imagined there could be such joy in making into the smart dress shops and merely making known her desires, when some famous mainline tucked before her, to become the possessor of the loveliest clothes that ever warmed any girl's heart.

There was a few other interesting moments, not quite such happy ones, when she went back to Mrs. Maloney's for her possessions. She was given all new clothes, of course, and such clothes that there were a few cherished treasures at the Maloney place with which she did not want to part, even if she could hold onto them for only six months.

The landlady was all smiles and expansive when Starr paid her bill in full.

"No bad feelings, my hopin', Miss Etienne," she purred, "and I sure hadn't to lock up your clothes like that, but it's like I was tellin' you, you can't."

"It's of no consequence, Mrs. Maloney," Starr assured wearily, as she hurried by her to climb the steps to her ball room.

Mrs. Maloney, folding the bills to tuck inside her ample bosom, beamed.

"Went you'd tell everything okay, Miss Etienne," she beamed. "You got clean curtains, an'—"

"Oh, did I forget to mention that I would no longer be needing the room?" Starr drawled, over her shoulder, but did not pause.

"You ain't? Where you think you're goin'?" Mrs. Maloney asked. Starr smiled down on her from the head of the stairs.

"No," she shook her head. "I've made up my mind to leave. I'm furnishing my new apartment. It's quite comfortable."

Mrs. Maloney's eyes bulged. "You are leavin'?" Starr smiled wanly and her slight shoulders shrugged.

the carelessness of being assumed of himself. It was going to be hard, harder than she had thought. Had enough of pretend to be such a devil as "Play-Girl," but with Michael-Hassan to complicate it—

"It's going to be some thing, Starr," Michael told her on the day the last of the furnishings came for her room-top apartment, and everything in place. He stood staring about him with happy eyes, glancing with that enthusiasm which was so much a part of him.

"Some place, hey? It oughtn't to be hard to fit right into being a lady from Cairo with all this money, just? Wait! I'll tell you of the writing mob get an eyelid." He laughed. "They're already all hot and bothered about meeting 'Play-Girl' and these rumors about her being part Egyptian are the finishing touch. . . . The office has done itself proud for your debut, and now it's up to you. . . . They have Pierre's ball room for the big event—no less—and all the modern in the smartest of the smart set, glancing with that enthusiasm which was so much a part of him."

There was that far-away look that Starr's eyes as she smiled.

"You're going to be surprised, Michael—Hassan, how I will play?"

It was a most pathetic thing they had selected, overlooking the East, but its long, low rooms were exquisite and ideal for their purpose.

From the moment she stepped into the tiny hallway it was like stepping out of New York and precipitately into the East. Strangely, all perforated silver lamps stood all about, but it was the perfume that was the matter.

Starr smiled. The windows were screened with muslin-lined white. How could she ever forget that? Though it seemed a stoniness she had wandered through those streets in far-off Egypt and seen window after window of that sort. She said:

"I'm glad you don't want me to wear a veil when I look out of them."

Starr's bedroom struck a more modern note. There were touches of Egypt there, too, notably in the pile of exquisite antique necklaces and bracelets which were heaped in an open jewel box of her dressing table, but on the whole the apartment was equipped as the house of any New York debutante, with its great bed of rose silk and silver, with the little mirror and the accoutrements necessary for aid in making a lovely woman all the more lovely.

Through the wide white door there was a glimpse of a sunken recessed bath. On the wall above it was painted a picture of an ancient Egyptian bathing beauty, depicting themselves in a lotus-decorated room.

Odd that the first thing that Starr thought of when she stepped into her new home was to run to that great bed, sink her black head into its silk and lace pillows and cry, and cry, and cry.

Michael had done his preliminary work thoroughly. The Tarnap Publishing Company, too, had spared themselves sparing no expense for their de luxe press stunt.

(To Be Continued)

Head Lido Fish
Has Head Like A Wildcat And Huge Curved Teeth

A deep sea fish with illuminated "port holes" was found recently at Capetown, South Africa. Known as "Atractosteus Roulei", it is only the fourth of its kind known to science.

Mr. CAFFEINE-NERVES loses his grip!

HUM-THIS SAYS IT
CAFFEINE-NERVES MAKES YOU SHAKY, UNSTEADY, AND UNRELIABLE. IT'S A LOT OF TEA AND COFFEE. . . . AND DOESN'T SLEEP WELL. . . .

FOR THE NERVOUS SYSTEM. ONLY FORGOT FROM NOW ON.

LET'S SING ANOTHER
ONE HELM, GEE, IT'S GOOD TO FEEL FIT AGAIN! AND FULL OF PEP AGAIN!

New Kind Of Phone Trade Revival In Britain

Can Change Tone Of Human Voice
A new kind of telephone which mimics the human voice was demonstrated at the Harvard Laboratory at Cambridge, Mass.

It does more than a human being can do. It can change a woman's voice into a man's or a man's into a woman's. It can convert a single voice into a duet, either single or song.

A bass singer could sound like a soprano simultaneously, one bass, the other soprano, tenor or any desired tone.

These feats of the new electrical mimic were demonstrated by Dr. Frank Jewett, head of the Bell Telephone Laboratories. The phone is a new instrument, never shown before, and Dr. Jewett said it was loved not for telephoning but to study the voice.

Dr. Friedrich Bergner, German Nobel prize winner in chemistry, found how trees can be converted into sugar, fat and protein, the main food requirements of human beings. An army might live on trees under the processes described by Dr. Bergner.

The minute telephone adds one new part to an ordinary phone. This part is big enough to cover one side of a room. It takes the electrical impulses that they from an ordinary phone. It does not transmit them. Instead it analyzes them and then builds up a new voice in electricity.

This new mimicking electrical voice is then transmitted to a loud speaker or a receiver and heard in the ordinary manner.

Should Raise Merle Gern
The poultry experts of the Dominion experimental farm at Ottawa are of the opinion that farmers are not sufficiently into the business of raising geese. They point out that annually at Christmas there is a market shortage of geese, which are a profitable price for that class of poultry. The advantageous circumstance about raising geese is that the farm offers the ideal condition, freedom of range and plentiful supply of green food.

Tags Come Back
Jack Miner, in a recent mail, heard from 78 of his missionary geese that had been killed by Eskimos and Indians in the Arctic Circle. The tags, during the summer months, had been collected by Rev. Arnold C. Harbert, missionary at Port Harrison, Hudson Bay, which is now the 60th parallel of latitude. The geese were put on between 1925 and 1926.

Little Helps For This Week

And every man that hath this hope in him purifieth himself, even as He is pure. 1 John 3:3.

Only Thine own to be. Only to live to Thee, Thine, with each day begun, Thine, with each end attained, Thine, with each day done. Send me Thine own.

God hides some ideal in every soul. He hides some great good thing, some noblest gift of excellence in this hidden impulse to do our best. There is a time when we are not content to be such merchants or doctors or lawyers as we see on the dead level below. It is here, God, standing silently at the door all day long, God whispering to the soul that to be pure and true is to succeed in life, and whatever we seek short of that will turn up like stubble though the whole world try to save it.

Is Still Growing
World's Tallest Man Now Over Eight Feet In Height

The tallest man in the world is believed to reside at Alton, Illinois. He is Robert Pershing Wadlow, aged 18. He is 8 feet 11 inches in height—and is still growing! His weight over three hundred pounds, and when the height figures are officially certified they will probably prove him to be the tallest human being in medical history. His father, an engineer, weighs a mere 145 pounds.

On Granatum Day in England \$42,000 was raised for the blind.

Just try CREAM PIE made with Christie's GRAHAM WAFERS

There's a recipe with every box. Try it, and see how the neighbors will envy your pie-making! Of course, Christie's Graham Wafers can be used in a number of different ways. Eaten any way they are delicious, nourishing and as fresh and pure as any biscuits can be.
